1. The Problem

Low Participation in Residential Communities

Residents may not be sufficiently motivated to participate in neighboirhood activities, limiting opportunities to improve community well-being and the residential environment

---

Who is affected, and why does it matter?

Residents

Low participation can mean fewer opportunities to build healthy relationship, stay physically active and maintain a clean neighborhood.

Property Developers / Management

Greater resident involvement may help maintain shared spaces and potentially reduce some maintenance costs.

Why it matters?

To create a harmonious residential community with a clean, well-maintained environment supported by active residents

2. Target User

MissionKu serves two main user groups.

Residents

Residents living within a residential community who can participate in neighboirhood activities

Key Benefit

Earn rewards by completing community tasks and activities.

Organisers

Certified users or property developers responsible for organizing community activities.

Key Benefits

Use rewards to motivate residents to participate in community events.

The main challenge

Organiser often struggle to motivate residents to participate in community activities.

3. Your Solution

Solutions: A community engagement app that uses gamification to motivate residents to participate in neighbourhood activities through tasks, points and redeemable rewards.

Community Tasks
Resident choose activities such as cleaning, recycling, and helping neighbours.

Achievement and Points
Residents earn points for completing approved tasks.

Verified Contributions
Administrators review submissions before points are awarded.

Redeemable Rewards
Points can be exchanged for available vouchers and products.

4. Innovation

Our innovations apply gamification to encourage real-world community participation through achievement, verified contributions, and redeemable rewards.

Why gamifications?

A sense of achievement

Completing tasks provides a sense of progress, accomplishments, and satisfaction similar to the feeling of completing objectives in games.

Tangible Incentives

Redeemable points give residents a visible benefit for their efforts, creating a potential win-win for residents and the community.

From Announcement to Action

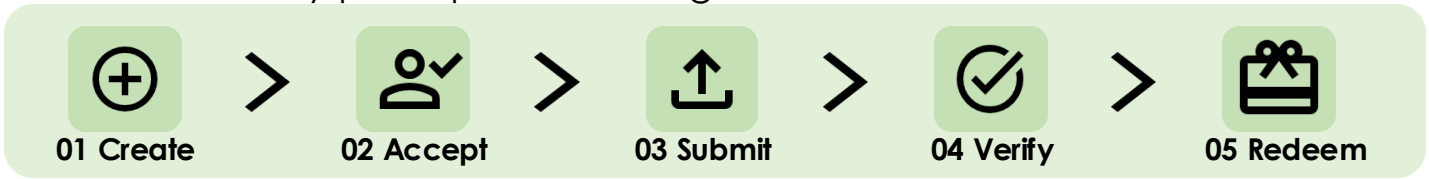

Instead of relying solely on group chats and noticeboards, MissionKu provide organized tasks, progress tracking, and a clear reward for approved contributions.

A Community-Based Reward System

Points earned through verified community work can be exchanged for vouchers or products, connecting residents' contributions to practical rewards.

5. How it Works

From community participation to tangible rewards.

01 – Admin Creates Tasks
The administrator publishes community activities with instructions, deadlines, and allocated point rewards.

02 – Residents Accept a Task
Residents browse available activities and choose one task to complete. Only one task can be active at a time.

03 – Complete and Submit Proof
Residents carry out the activity and upload evidence of completion through the app.

04 – Admin Reviews the Submission
The administrator checks the evidence and approves the task or requests corrections.

05 – Earn and Redeem Points
Approved tasks earn points, which residents can accumulate and exchange for available vouchers or products.

6. Impact

Residents

- Earn rewards and vouchers while contributing to their community.
- Develop positive habits through participation in community missions.
- Feel more connected and engaged with their neighborhood.

Township & Environment

- Cleaner public spaces through regular community participation.
- Increased awareness of environmental responsibility and sustainability.
- Stronger community culture driven by collective action.

Expected Outcomes

- Higher resident participation in township initiatives.
- Improved cleanliness and environmental conditions.
- Stronger sense of ownership and responsibility among residents.

7. Feasibility

Can the idea be realistically implemented?

- Uses existing technologies such as mobile applications, cloud databases, GPS/location services, and digital reward systems.
- Does not require expensive hardware or major infrastructure changes.
- Residents only need a smartphone to participate in missions and redeem rewards.

MissionKu is a practical and scalable solution that leverages existing mobile technology, community partnerships, and reward-based engagement.
By starting with a pilot township and expanding based on proven participation, the platform can be realistically implemented and sustained over the long term.

- **Resources**
- Mobile application for residents.
- Secure database and cloud infrastructure.
- Reward management system for points and voucher redemption.
- **Stakeholders**
- Residents who participate in missions.
- Township management to create and monitor tasks.
- Local businesses that sponsor vouchers and rewards.
- Community organisations that support environmental initiatives.
- **Deployment Approach**
- Pilot in one residential community.
- Launch environmental missions (clean-up and recycling).
- Verify submissions through photo evidence.
- Reward residents with points and vouchers.
- Expand to additional townships based on participation and impact.

8. Implementation

Phase 1: Pilot Launch
- Deploy MissionKu in a selected residential township.
- Introduce simple missions such as litter collection, recycling and community clean-up activities.
- Recruit local businesses as reward partners.

Phase 2: Community Engagement
- Residents complete missions and submit photo proof through the app.
- Township administrators verify submissions and award points.
- Points can be redeemed for vouchers, discounts, or community rewards.

Phase 3: Expansion & Optimization
- Introduce additional mission categories. (environmental, wellness, community service activities)
- Analyses participation data to improve engagement.
- Scale the platform to multiple townships and communities.

❖ Implemented via phased deployment approach, combining digital task management, reward incentives and community partnerships to encourage long-term resident participation and environmental sustainability.

10. Why Your Team Should Win

- MissionKu deserves to win because it tackles a real community challenge by strengthening connections among residents.
- Our solution goes beyond a mobile app by creating a sustainable ecosystem driven by community participation.
- We carefully balance gamification with social responsibility and encouraging engagement while keeping community wellbeing at the core.
- The prototype includes resident and admin workflows, accessible design and real-world usability considerations.
- Most importantly, MissionKu is practical, scalable and ready to be developed into a working solution that fosters stronger neighbourhood relationships and creates meaningful social impact.

MissionKu
